

## LOCK OPERATION AND CARE

The lock functions as a slam lock, the key is used to unlock the top lid and it locks automatically when the lid is closed. The lock can not stay unlocked.

The lock is keyed alike, 2 keys are provided per lock. The key is a standard size and can be duplicated by a locksmith.

A flip up cover prevents dirt and moisture from seeping into the key hole, always keep the cover in the closed position.

Lubricate the lock a few times a year to keep the keys from sticking. Use de-icing fluid in the winter months to prevent the lock from freezing.
